Design and MATLAB concepts have been integrated in text.

* Integrates applications as it relates signals to a remote sensing system, a controls system, radio astronomy, a biomedical system and seismology.

My Personal Review:
Im a UW computer engr student. We use this book here because Van Veen is the author (he is a professor here). The book is aweful. Its just plain bad. The material lacks clarity, the examples are either too easy, too hard, or do not provide any instruction at all. The math often has missing steps leaving the reader clueless as to how one arrives at the final result. The matlab code is worthless -- it doesnt teach anything nor explain anything. I recommend Oppenheim or Schaums guide. I beg you not to waste your time or money on this ...text.
